

JEROME R. SCELZA

REGULATED DEVICE ENGINEERING & DIAGNOSTICS EXECUTIVE

New York, NY | 631.897.5215 | scelzajr@gmail.com | linkedin.com/in/jerome-scelza-8560b0108

EXECUTIVE SUMMARY

Mechanical and biomedical engineer, inventor and medical-device executive with 15+ years taking regulated diagnostics and integrated hardware/software products from concept through design controls, verification/validation, regulatory clearance, design transfer, manufacturing scale-up and market launch. As Co-CEO/CTO of Drawbridge Health, ran the upper-arm capillary blood-collection business end to end: two FDA Class II 510(k)s (OneDraw A1C, K183230; NanoDrop OTC, K223826 - the first over-the-counter lancing device labeled for the upper arm cleared in the U.S.), CE Mark and Japan PMDA certification, a patent estate grown from 10 to 80+ assets (sole inventor on the next-generation collection family), and platform deployment at population scale (10,000+ remotely collected samples, 99.9% lab-processed) - while deploying $15M+ across R&D, quality, manufacturing, clinical/lab partnerships and commercialization. Career progression runs hands-on biomedical engineering to R&D leadership, CTO, and CEO roles, including a 20-person, $7M engineering organization and four venture-backed companies. Fluent in 21 CFR 820, ISO 13485, ISO 14971 and IEC 62366, and equally fluent in P&L, portfolio strategy, pharma/lab partnerships and payer and consumer go-to-market.

CORE: Regulated Device R&D • Class II / 510(k) • Design Controls & QMS (21 CFR 820 / ISO 13485) • ISO 14971 Risk & IEC 62366 Usability • Design Transfer / Manufacturing • CLIA Lab Integration • Global Regulatory (FDA / CE / PMDA) • IP Strategy • P&L & Portfolio Leadership • Commercialization

PROFESSIONAL EXPERIENCE

MANIFOLD HEALTH | New York, NY **Jan 2026 – Present**

Founder & Chief Executive Officer

- Founded and lead a biological-intelligence and remote-monitoring infrastructure company: self-collected blood, curated lab panels, proprietary biological risk indices, monitoring workflows and outcome verification for payors, employers and provider networks; Sidewalk Health is the member-facing product layer.
- Launched a CLIA-certified laboratory (Lumen Diagnostics) and built national diagnostic infrastructure spanning at-home collection, digital requisitions, lab integrations, an AI care navigator and longitudinal biomarker programs.
- Structured the first health plan to include lab-grade at-home blood testing and biological intelligence as a covered benefit in every plan design (50-state group insurance trust); secured national partnerships with wellness companies, insurance brokers, employee-benefits firms and health systems, plus a wholesale supplement agreement with Thorne.
- Own product and technology strategy, pricing architecture, budget, compliance posture and hiring across engineering, data science, clinical and commercial functions; designed Medicare Advantage and managed-care programs grounded in CMS-HCC, HEDIS and Star-rating economics.

THORNE HEALTHTECH / DRAWBRIDGE HEALTH | New York, NY **Apr 2021 – July 2025**

Co-CEO & Chief Technology Officer, Drawbridge Health

- Ran the regulated-device business unit with end-to-end accountability for strategy, R&D, budget, technical execution, quality/regulatory coordination, manufacturing, laboratory integration and commercialization; deployed $15M+ from acquisition through market launch and spin-out preparation.
- Led NanoDrop (dual nano-lancet, Class II OTC) through FDA 510(k) clearance ahead of schedule and under budget - named in the FDA summary as primary company contact - and commercialized the OneDraw A1C Test System (K183230); expanded global access through CE Mark (2023) and Japan PMDA certification (2022) via strategic partnerships including Sumitomo Dainippon Pharma.
- Directed design-controlled development under 21 CFR 820 / ISO 13485 with ISO 14971 risk management and human-factors validation: pain and preferred-method user studies, penetration depth, vacuum performance, sharps-injury prevention, biocompatibility, sterilization, shelf-life and packaging/shipping verification.
- Selected and managed development and scale manufacturing partners, CLIA/CAP laboratory partners, packaging/fulfillment infrastructure and critical suppliers; drove design-transfer and manufacturing-readiness decisions and cost/time-to-market tradeoffs.
- Deployed the platform at population scale: University of Cambridge / MRC Fenland study (4,023 participants, 10,000+ remotely collected samples, 99.9% lab-processed; J Telemed Telecare 2024), DoD PROMETHEUS / Cancer Moonshot 2.0 (thousands of devices), Parexel/Synexa decentralized serology trials, and subsequent independent VA and UK dietary-biomarker studies.
- Secured $1M+ in strategic partnerships in the first year of commercialization, including the GenTegra whole-blood DNA preservation collaboration; OneDraw named MedTech Breakthrough Best Overall Medical Device Product (2023).
- Expanded the global IP portfolio from 10 to 80+ granted and pending patents across hardware, software and bioanalytical processes; sole inventor on the next-generation sample-collection family (WO2023049404 / EP4405655); products recognized by Fast Company and Red Dot.
- Partnered across Quality, Regulatory, Clinical and Operations to maintain inspection-ready, compliant development and submission programs and to mitigate technical, regulatory, supply-chain and commercialization risk.

THORNE HEALTHTECH | New York, NY **Jan 2021 – Nov 2023**

Entrepreneur in Residence, Transformational Technologies

- Championed Thorne's $10M acquisition of blood-collection technology: led technical/commercial diligence, valuation and deal structuring, then assumed operating leadership of the acquired business.
- Evaluated medical-device, diagnostic and life-science technologies for executive leadership; translated technical, regulatory, IP, manufacturing and market risk into investment and product decisions.

THORNE RESEARCH | New York, NY **Jun 2017 – Jan 2021**

Biomedical Scientist, AI/ML

- Built machine-learning and computer-vision systems for regulated/clinical applications, including a $500K pharmaceutical program for automated acne detection and severity grading.

OOVA | New York, NY **Aug 2016 – Apr 2021**

Co-Founder & Chief Technology Officer

- Invented and led development of a patented smartphone-based quantitative hormone diagnostic (LH, PdG) combining lateral-flow assays, optical imaging and computer vision; co-inventor on U.S. Patent 12,591,974 and international family; owned integrated hardware/software development from prototype through commercial launch of a Mount Sinai spinout.
- Led FDA registration, product validation and commercialization; scaled to $50K+ MRR and supported financing through the company's $10.3M Series A ($12.5M+ raised overall; investors including Virgin Group and Spero Ventures).
- Built cross-functional product capabilities spanning assay development, mechanical/industrial design, software, algorithms, manufacturing and consumer experience; platform data underpins peer-reviewed reproductive-health analyses (ASRM 2022; Medicina 2023).

ICAHN SCHOOL OF MEDICINE AT MOUNT SINAI | New York, NY **Jun 2017 – Oct 2018**

Engineering Program Manager, Institute for Next Generation Healthcare

- Led a 20-person organization of engineers, data/research scientists and project managers translating biomedical research into commercializable technologies; managed a $7M budget and portfolio/resource-allocation decisions.
- Directed programs spanning medical devices, imaging, wearables, IoT, machine learning, lab automation and clinical research - including the Lab100 next-generation preventive-health platform and the LEO Pharma hyperspectral skin-inflammation trial (NCT03192280); secured follow-on funding and pharmaceutical partnerships.

ICAHN SCHOOL OF MEDICINE AT MOUNT SINAI | New York, NY **Jan 2012 – Jun 2017**

Biomedical Engineer / Research Staff

- Hands-on engineering across mechanical design, DFM, microfluidics, spectroscopy, imaging, microscopy, 3D printing, wearable sensors and IoT data acquisition; supported human-subject research and co-authored peer-reviewed publications.

PORTENT TECHNOLOGIES **Jan 2011 – Jun 2013**

Mechanical Engineer

- Designed heavy-lift quadcopter structures; led CAD/FEA, design for manufacturing, prototyping and electromechanical/control-system integration.

SELECTED REGULATED DEVICE & R&D LEADERSHIP

FDA / GLOBAL	Class II OTC 510(k) leadership; CE Mark; PMDA certification; FDA registration; global regulated-device commercialization.
R&D / DESIGN	Concept-to-commercialization leadership across upper-arm blood collection, diagnostics, assays, computer vision, integrated hardware/software and usability.
QUALITY / RISK	Design-controlled development; quality/regulatory partnership; verification/validation, biocompatibility, sterilization, packaging/shelf-life and user-performance programs.
MANUFACTURING	CM selection, scale-up, supplier management, DFM/design transfer, packaging/fulfillment, laboratory integration and cost/time-to-market tradeoffs.
CLINICAL	Remote blood-collection research, decentralized-study applications, DoD PROMETHEUS/Cancer Moonshot, Mount Sinai human-subject research and pharmaceutical collaborations.

EDUCATION

Johns Hopkins University — M.S., Computer Science (Biomedical Concentration)
New York University — B.S., Mechanical Engineering & Physics | Pi Tau Sigma Honors

SELECTED IP & SCIENTIFIC RECORD

Patents / IP: Sole inventor, Systems and Methods for Sample Collection (Drawbridge; WO2023049404 / EP4405655 / HK40114997); co-inventor, Methods, Devices and Systems for Detecting Analyte Levels (Oova; U.S. 12,591,974 / GB2591614B); executive steward of the Drawbridge estate expanded from 10 to 80+ granted/pending patents worldwide.

Recognition: MedTech Breakthrough Best Overall Medical Device Product (2023); Red Dot and Fast Company product recognition; quoted as Co-CEO in FDA, CE Mark, PMDA, DoD PROMETHEUS and Cambridge/MRC announcements; Oova financings covered by TechCrunch.
